Design and Develop a website for "Work Opportunities in Japan"

The objective of this assignment is to evaluate your ability to create a visually appealing and user-friendly website focused on showcasing work opportunities in Japan while demonstrating proficiency in UI/UX design and web development technologies.

Requirements -

1. Design Phase -
   ● Design a mockup of the website. The design should reflect the theme of "Work Opportunities in Japan" and prioritise user experience.
   ● Include multiple sections such as Home (overview of work opportunities), Job Listings, About Japan (culture, lifestyle), etc. Feel free to be creative here.
   ● Incorporate Japanese cultural elements and aesthetics into the design where appropriate.
   ● Ensure the design is responsive and accessible across different devices.

2. Development Phase -
   ● Develop the website using HTML, CSS, and JavaScript, ensuring it aligns with the design created in the previous phase.
   ● Implement features such as a searchable job listing section, interactive elements, and smooth transitions.
   ● Integrate any additional functionalities deemed necessary for enhancing user experience.
   ● Ensure the website is optimised for performance and loading speed, considering potential international users.

3. Bonus Points -
   ● Implementation of multilingual support, allowing users to switch between Japanese and English.
   ● Integration with APIs to fetch real-time job listings or other relevant data.
   ● Incorporation of location-based services or maps to help users explore job opportunities across different regions in Japan.
   ● Use of animations or micro-interactions to engage users and create a delightful browsing experience.

4. Evaluation Criteria -
   ● Relevance and creativity in incorporating the theme of "Work Opportunities in Japan" into the design.
   ● Adherence to UI/UX principles and effective use of Japanese cultural elements.
   ● Quality of code structure, readability, and organisation.
   ● Responsiveness and cross-device compatibility of the website.
   ● Functionality and usability of interactive elements and features.
   ● Implementation of bonus features and their impact on user experience.

5. Submission Guidelines -

Please submit only a drive link with **open access** containing
1. link to the live website
2. source code files
3. a readme.txt file explaining the source code, APIs, etc.
4. a GitHub link for the same

   Any malpractice detected will also lead to your candidature being blocked for future opportunities.

Thanks,
Aanchal
